## **ePro Secure Data Exchange Deployed**

DALLAS, TX November 19, 2007 - eCore Software Inc. announces the release of ePro Secure Data Exchange (SDE), a software package that provides a standard software interface for vendors to exchange common data over the Internet. The biggest hurdle for exchanging common data elements is the programming required by each vendor and the associated costs. ePro SDE circumvents that obstacle. This innovative software exchanges data **securely** between vendors using the latest Internet technology.

CentreLearn (<http://www.centrelearn.com>), a company that provides an Online Learning Management System to the EMS industry will be the first vendor to plug into the infrastructure. Mutual customers of eCore and CentreLearn can now avoid dual entry for common data between both vendor product suites.

### **About eCore Software**

eCore Software Inc. has been a leading provider of HR management solutions to Public Service industry operations like EMS companies, fire departments and police departments since 1998.
