

ePro Scheduler Plus supports time and attendance recording using the latest biometric finger-print scanning technology.

Take timekeeping and exception management in ePro Scheduler to a whole new level with the ePro BioClock. With the ePro BioClock employees clock in and out by scanning their finger.

As employees clock in for shifts, the ePro BioClock checks the ePro Scheduler database to ensure that critical certifications are up to date. It also checks employees' schedules and requires feedback when employees clock in or out outside of configurable grace periods.

When enrolling a new employee at a particular location, the ePro BioClock automatically synchronizes with the ePro Scheduler database so the employee can clock in or out on any ePro BioClock at any location.

Through state-of-the-art technology, ePro BioClocks integrated with ePro Scheduler provide the most cost effective scheduling and time & attendance system on the market.

The ePro BioClock is a part of eCore's ePro Product Suite including ePro Scheduler, eCore's employee scheduling and timekeeping solution, ePro Tracker, ePro Fleet, ePro ConEd, and ePro Inventory, all via a single login.

Key Features

- Completely eliminate buddy punching
- Eliminate employee badges and barcodes
- Fully integrated with ePro Scheduler
- Continues to function even when internet is unavailable
- Automatically synchronizes fingerprint scans to all locations
- Checks critical certifications upon clock-in
- Requires feedback from employees as they clock in/out early or late
